1. Approves the installation of a bus passenger shelter at the following locations:
 - a. 174 Centaurus Road (in accordance with Attachment A to the staff report attached to the meeting agenda).
 - b. 61 Cashmere Road (in accordance with Attachment B to the staff report attached to the meeting agenda).

Lee Sampson/Tim Scandrett

Carried

10. Wilsons Road South - No stopping and right turn restrictions

Board Comment

1. The Board expressed its concern about the safety of the measures proposed. It noted, in particular that the size and location of the proposed median island would not act as a physical barrier to prevent vehicles turning right from Wilsons Road into the shopping complex. At the same time the Board was concerned that pedestrians may opt to cross Wilsons Road at the median island rather than the further away pedestrian crossing and this would give rise to a significant safety hazard with cyclists and motor vehicles turning into and out of the new supermarket entrance.

Staff Recommendations

That the Waihoru/Spreydon-Cashmere Community Board:

1. Approve that under clause 7 of the Christchurch City Council Traffic and Parking Bylaw 2017, that the stopping of vehicles be prohibited at all times commencing from the intersection of Beckford Road and Wilsons Road South and extending in a north-westerly direction for 60 metres as shown on Attachment B to the report on the meeting agenda.
2. Approve under section 334 of the Local Government Act 1974 the installation of the median island and road surface changes as shown on Attachment B, attached to the report on the meeting agenda.
3. Approve that under clause 17 of the Christchurch City Council Traffic and Parking Bylaw 2017 that the right hand turn movement for all vehicles from the southeast approach of Wilsons Road South to the new entrance at 92 Wilsons Road be prohibited at all times as detailed on Attachment B to the report on the meeting agenda.
4. Revoke any previous resolutions pertaining to traffic controls made pursuant to any bylaw to extent that they are in conflict with the traffic controls described in this report.

The above staff recommendations were moved by Phil Clearwater and seconded by Melanie Coker and when put to the vote the resolution was lost.

7. Notice of Motion

Community Board Decided SCCB/2019/00070

Part A

Pursuant to Standing Order 22 - Notices of Motion, the following motion was moved by Helene Mautner

That the Waihoru/Spreydon Cashmere Community Board requests that the Christchurch City Council recognises the values of the riparian margins of our rivers and waterways as part of its strategic priority on safe sustainable water supply and waterways, and investigates the implementation of riparian margin measures directed at the eradication of weeds and the prevention of weed spread through the ecological restoration of the riparian margins by densely planting competitive native plants, and reducing mowing and cutting of margins to prevent active spread of seeds.

Background

Invasive weeds are spreading through our local waterways replacing natural species and changing its ecological balance. Once weeds are established their eradication becomes problematic and expensive to remove. Riparian margins play an important role in maintaining healthy waterways by acting as natural barriers to weeds, by minimising bank erosion when established with dense competitive native plants, protecting ecosystems, and enhancing water quality.

The spread of weeds is exacerbated where:

- There are plant gaps in the riparian margins.
- Banks are mowed and cut; these activities can create gaps for colonisation and spread the seeds of weeds.
- Some maintenance and eradication procedures can actually accelerate the spread of invasive weeds, e.g., cutting of weeds may release clumps into the water which then travel to other areas where they spread re-establishing themselves.

Establishing riparian margins with dense competitive native plants benefits the local natural ecology by

- being barriers to weed invasion;
- reducing maintenance, restoration and eradication costs;
- enhancing the river's ecological values;
- creating and enabling healthy and productive habitats for aquatic life;
- reducing bank erosion; and
- reclaiming the New Zealand cultural identity of our waterways.

Desired Outcomes

The reduction of invasive weeds in our waterways through ecological riparian margin management:

- Riparian margins densely planted with competitive native plants to create barriers to weed invasion.

- Weed eradication programs to prevent the spread of weeds and to reduce maintenance and restoration costs.
- Reduction of weeds enhances the natural values of the waterways.
- Weed reduction enhances the natural biodiversity of the waterways.
- Reduces bank erosion.
